

Process work for creating the sprite for the ball:

1. Crop Image to Circle:

- First I used photopea (and other programs) to crop the image into a circle around the smiley face.

2. Center the Smiley Face:

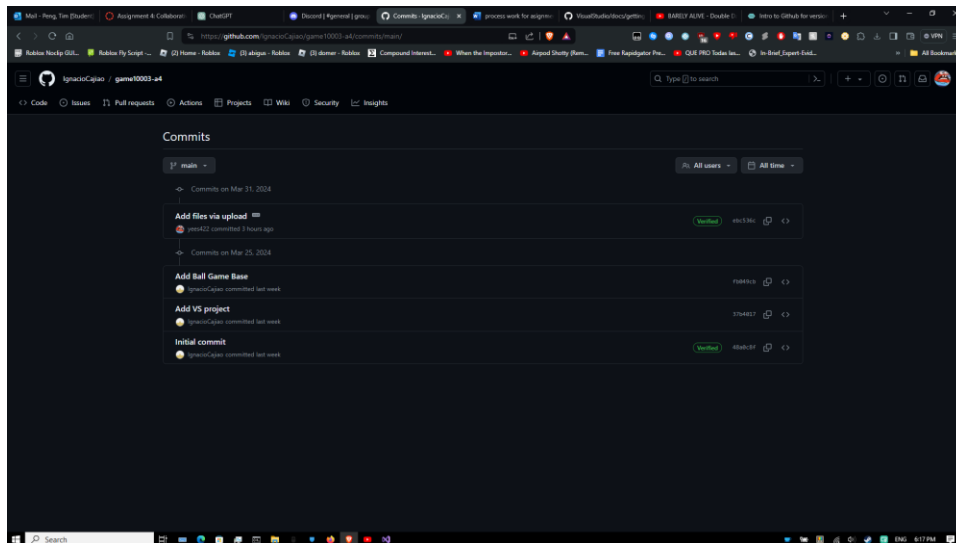

- Then, I adjusted the position of the smiley face to make sure it's perfectly centered within the circle crop.

3. Save Image to Computer:

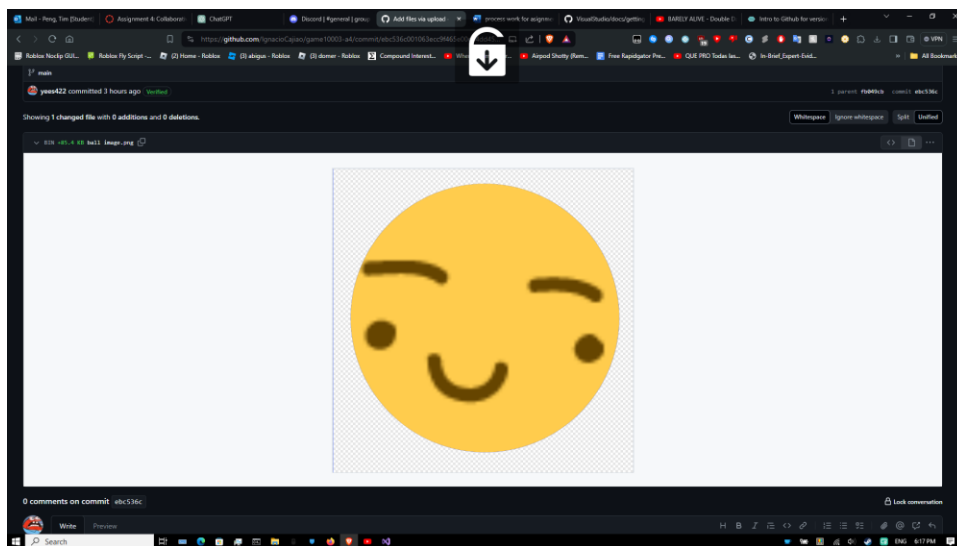

- Then, I saved the edited image and named it “ball image.png”.

4. Upload Image to GitHub Repository:

- Finally, I went to my team’s github project repository and uploaded the image to be used as a sprite for the ball.
